

already on the system. I guess the real...where the rubber meets the road on this amendment is the fact that if you adopt the committee amendments, what that would necessitate occurring would be, one, you would have to place \$147,000 back into DMV's budget, and the reason that is is that there is the data entry positions over at DMV that have been entering this material historically over time. Now once the entire system is going, what will happen is that the title registration will be entered into the computer by the county thus eliminating the need for the data entry positions in the whole...that whole process over in the Department of Motor Vehicles. So this is one of those occasions where by investing in computers we are actually going to save a marginal amount of dollars on the state. The problem is the only way you can realize that savings is that if the entire state is using the computer process because without that you have to maintain the old system. And, actually, in the original bill, in the original budget brought to the Legislature by the Governor they assumed a savings of \$270,000 in 1994-95, made the assumption that all 93 counties were going to be on. Well, you can't...you can't dismantle the system over at DMV until all 93 counties are on. So, having that in mind, the Appropriations Committee said...I think we felt that July 1, '94, may be pushing the system a whole lot, we're...we put in...we introduced a bill January 1, '95 and pulled out instead of the 270 some thousand dollars the Governor had showed in savings, we only showed a six months savings of \$147,000. So if you adopt the committee amendments, we can't take that savings because what will have to occur is you'll have to continue the old system and that costs money. And if you adopt the committee amendments and postpone it all the way till '97, you're basically talking about \$300,000 a year to keep the old system going will have to be continued. You can't realize the savings until all 93 counties are on. And we've talked about mandating this. I, too, have concerns about mandating it. The fact is that the only way...

SPEAKER BAACK: One minute.

SENATOR MOORE: ...you're ever going to get the system to work is to have all 93 counties on and the only way you're ever going to get all 93 counties on is to mandate it to them. Now those of you that are concerned about mandating the costs of it, it's also instrumental to understand that the state is going to pay for the cost of the system, going to pay the cost of the terminal and the printer, going to pay for the cost of the
